DETAILED ACTION

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 9, there is no antecedent basis for "the drilling fluid".

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4, 6 and 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Wingrave (4988450).

Wingrave teaches a composition which is used to stabilize soils such as shale which comprises a polymer, such as polyacrylamide, PVA, polyacrylates, cellulose or Xanthan, either potassium silicate or sodium silicate, and may further comprise

potassium carbonate when potassium silicate is used (see Tables and column 9, lines 15-21). Such would inherently possess properties within the scope of the present invention.

6. Claims 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitebay (5072791).

Whitebay teaches a method of stabilizing formations containing silt and sand wherein such formations are stabilized by a mixture of a Polyvinylacetate, potassium silicate and potassium carbonate, and may further comprise a guar or cellulose polymers (see columns 2, line 1 – column 4, line 45). Such would inherently possess properties within the scope of the present invention.

7. Claims 1, 4, 8-11 and 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Holland (4470463).

Holland teaches a fluid for stabilizing soil in a subterranean zone, which comprises a cement, clay, sodium silicate and a cellulose polymer (see abstract). Such would inherently possess properties within the scope of the present invention.

8. Claims 1,3, 4, 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Andreichuk (4596838).

Andreichuk teaches a method of stabilizing a geological formation using a fluid which comprises sodium silicate, aluminum silicate, sand, clay and an acrylic polymer

(see column 4, lines 3-53). Such would inherently possess properties within the scope of the present invention.

Double Patenting

9. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

10. Claims 1-17 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6248697. Although the conflicting claims are not identical, they are not patentably distinct from each other because although the claims of US 6248697 differ such as in teaching the use of an aluminate, the claims therein teach the same components as used in the present processes and compositions, and would render the current claims obvious to one of ordinary skill in the art.
